CREATOR MODE · PARENT GUIDE

Creator Quest

Everything you need to know to be your kid's co-pilot. Read this in 10 minutes, then let them take the wheel.

Creator Mode is an independent course. It is not made, sponsored or endorsed by Roblox Corporation or Anthropic. Roblox and Roblox Studio are trademarks of Roblox Corporation. Claude is a product of Anthropic.

START HERE

What's in the download

File	What it is
Creator Quest.html	The game your kid plays through. Double-click to open it in Chrome, Edge or Safari. A Duolingo-style path of 32 steps: a 3-quest warm-up, then 8 big game projects with 21 short skill quests between them. XP, levels, streaks, badges, a prompt mini-game and the 3D Vault browser. Each kid gets their own profile. Progress saves in that browser.
Creator Vault folder	118 ready-made Roblox models in 10 packs (.rbxmx files). 46 of them have scripts inside and work as soon as you press Play: coins, checkpoints, jump pads, portals, pets, swords.
Rescue Scripts folder	A backup script for each of Missions 1–7. The app turns each one into a prompt Claude can install for you. If Claude's version breaks and you can't fix it, paste the rescue script and keep going.
Parent Guide.pdf	This guide.

The co-pilot rule

Claude's terms require users to be 18 or older. So Creator Quest is built for **you and your kid together**: Claude runs in the **Claude Desktop app on your account**, connected to Roblox Studio on the same computer. Your kid reads the mission, chooses and edits the prompts, watches Claude build, and does the testing. You send the prompts, click **Allow** when Claude asks to use a Studio tool, and hold the "stamp" button at the end of each big game.

What you need

- A Windows PC or Mac. Roblox Studio doesn't run on phones, tablets or Chromebooks.
- Roblox Studio, free from **create.roblox.com**.
- A Roblox account for your kid. Turn on Parental Controls for under-13s.
- The **Claude Desktop** app (claude.ai/download), signed in to your Claude account.
- Studio's built-in connector switched on: Assistant › ⋯ › Manage MCP Servers › Enable Studio as MCP server › Quick connect: Claude Desktop. The warm-up walks you through it.

How building works

Every change is made through Claude. Your kid describes what they want, Claude builds it directly inside Roblox Studio (scripts, parts, models), presses Play to test it, reads the errors and fixes them. No copying or pasting code. Big games are long builds, so a paid Claude plan is smoother; check that your plan supports desktop connectors.

The path: skill quests, then a big game

Unit 0 is a warm-up: install Roblox Studio, find the panels, and run a first script from Claude, with a picture for every click. Then the path has 8 units. Each unit ends with a **big game project** (45–60 minutes). From Unit 2 on, 3 **skill quests** (10–15 minutes each) come first and teach what that game needs: detailed models from prompts, leaderboards, floating signs, loops, conveyors, lighting, tools, NPCs, chance tables, tweens, screen GUIs, teleporters, timers, health bars, effects, boss design, terrain, game design and publishing. A skill quest is a short lesson: learn it, try one prompt in Studio, answer one question. Short quests are great for school nights.

Each big game has 5 stages

1. AI Brain	A short lesson about how AI works, plus a 2-question quiz. Read it together.
2. Build	Setup checklist, the **Mega Prompt** (one prompt that makes Claude build a whole game system in Studio, test it and fix it), and a "test it" checklist.
3. Boss Bug	A short piece of real code with one bug. Your kid taps the broken line.
4. Power-ups	Extra prompts that add features. Kids pick what sounds fun.
5. Finish	A conversation question for you, then you hold the stamp button.

THE MISSIONS

From first obby to published game

#	Mission	What your kid builds	AI lesson
1	**Lava Tower** 45 min	A 25-stage spiral obby over a lava lake with elevators, spinning lasers, vanishing blocks, checkpoints and a win pad	What AI is: a prediction machine
2	**Coin Rush** 50 min	Spinning coins, Gold Rain events, a shop with Speed Boots, Moon Jump and Giant Mode, and saving	Prompting: what, where, how
3	**Tycoon Factory** 60 min	A full tycoon: claim pad, droppers, conveyor, collector, 7 upgrades and a Golden Statue	Breaking big jobs into steps
4	**Zombie Night** 60 min	A night-time graveyard, swords, zombie waves, giant zombies every 5th wave	AI makes mistakes: always test
5	**Pet Hatchery** 55 min	Gems, a mystery egg, 5 rarities, 8 pet types that follow you and boost gems	Chance and patterns in AI
6	**Round Arena** 60 min	A lobby + countdown + round loop with Falling Tiles and Rising Lava modes and an on-screen timer	Staying safe online
7	**Boss Battle** 60 min	A giant boss with a health bar, ground slams, meteor rain and rage mode	Iterating with feedback
8	**Dream Game** 2+ hours	Their own game, designed with the Dream Game Designer, built with the Vault, playtested and published	You're the creator: originality and honesty

Each mission starts in a fresh Baseplate place. Mission 8 is where everything gets combined. The 3 skill quests before each game are listed in the app.

Conversation starters (one per mission)

1. How is Claude different from a friend?
2. What made your second prompt better than your first?
3. What's a big job at home we could break into small steps?
4. When could AI be wrong about something besides code?
5. Why might a game make Mythic pets so rare?
6. What would you do if someone online made you feel uncomfortable?
7. What's something you got better at by practicing?
8. Who should get credit when you build something with AI?

WHEN THINGS GO WRONG

Troubleshooting

Problem	Fix
Claude can't see Studio	In Studio: Assistant › ⋯ › Manage MCP Servers. Make sure "Enable Studio as MCP server" is on and the green light shows a connected client. Update Studio, then restart both Studio and Claude Desktop. Studio and Claude must be on the same computer.
The MCP Servers option isn't there	Update Roblox Studio to the latest version. Some Studio AI features can depend on the signed-in account; if you can't find it on your kid's account, try signing in to Studio with your own Roblox account.
Claude keeps asking for permission	That's normal: Claude asks before using a Studio tool. Click Allow. Claude Desktop may offer to remember the choice for the session.
Something in the game doesn't work	Use the "fix prompt" in the Build stage: say what you did and what happened. Claude reads Studio's Output for errors, fixes the script and playtests again.
Claude stopped halfway	Type "continue". If the connection dropped, check the green light in Studio and send the prompt again.
We've tried three fixes and it's still broken	Send the "backup prompt" from the Build stage. Claude swaps in a ready-made version of the whole game.
Two games are mixing together	Each big game should be its own place. Start a new Baseplate for each one.
Adding Vault models	In the app's Vault, tap "Ask Claude to add it" and send the prompt: Claude builds the model into your place. Or insert a whole pack yourself: unzip the download first. Then right-click Workspace › Insert from File and browse to the Creator Vault folder.
Creator Quest progress disappeared	Progress is saved in the browser you used. Use the same browser on the same computer, and don't use a private window.

Online safety

- Publish games as Private or Friends only at first (Game Settings on create.roblox.com).
- Keep Roblox Parental Controls on for under-13s.
- Mission 6 teaches never to share full name, school, address or passwords with AI or in game chat.
- Claude stays on your account in the desktop app. Your kid doesn't need their own.

The Creator Hours deal (optional)

Want to shift screen time from playing to making? Agree on a ratio together, like "an hour of building earns thirty minutes of playing." Track it below.

1 hour building = _____ minutes playing

Date	What we built	Minutes	Initials
